PAGE 1 · CORRECTION  
RECORD

## What has the system earned permission to do?

Use this working record to connect intent, physical state, cause, action, authority, evidence, and learning scope before a correction is treated as reusable intelligence.

|                                                                         |                                                                             |                                                                   |
|-------------------------------------------------------------------------|-----------------------------------------------------------------------------|-------------------------------------------------------------------|
| <b>Correction ID</b><br><hr/> Date · machine · part · operation · owner | <b>Correction class</b><br><hr/> Thermal · tool · fixture · program · other | <b>Current posture</b><br><hr/> Observe · Shadow · Bounded · Hold |
|-------------------------------------------------------------------------|-----------------------------------------------------------------------------|-------------------------------------------------------------------|

## 1 · MANUFACTURING INTENT

|                            |       |
|----------------------------|-------|
| Part / feature / operation | <hr/> |
| Geometry and tolerance     | <hr/> |
| Program / CAM context      | <hr/> |
| Expected behavior          | <hr/> |
| Intent source / owner      | <hr/> |

## 2 · RECONSTRUCTED PHYSICAL STATE

|                                             |                                                   |                                                     |
|---------------------------------------------|---------------------------------------------------|-----------------------------------------------------|
| <b>Machine + calibration</b><br><hr/> <hr/> | <b>Tool + fixture + part frame</b><br><hr/> <hr/> | <b>Material + environment + time</b><br><hr/> <hr/> |
|---------------------------------------------|---------------------------------------------------|-----------------------------------------------------|

|                               |       |
|-------------------------------|-------|
| Sensor and metrology evidence | <hr/> |
| Coordinate-frame lineage      | <hr/> |
| Missing or suspect data       | <hr/> |

## 3 · RESIDUAL AND CAUSE HYPOTHESES

| Observed difference | Ranked cause hypothesis | Supporting evidence | Alternative / disconfirming test |
|---------------------|-------------------------|---------------------|----------------------------------|
|                     |                         |                     |                                  |
|                     |                         |                     |                                  |

## PAGE 2 · EVIDENCE GATE

## Prove the result before retaining the learning.

## 5 · HUMAN AUTHORITY AND CONSEQUENCE

| Decision                           | Named owner | Required approval | Override / stop condition |
|------------------------------------|-------------|-------------------|---------------------------|
| Run replay or simulation           |             |                   |                           |
| Run shadow recommendation          |             |                   |                           |
| Execute controlled machine test    |             |                   |                           |
| Release bounded correction         |             |                   |                           |
| Retain result as reusable learning |             |                   |                           |

## 6 · VALIDATION SEQUENCE

|                                                                                                                                                         |                                                                                                                          |                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| <b>A · Replay / simulation</b><br>Inputs, versions, expected outcome, pass/fail criteria.<br><br><hr/><br><hr/>                                         | <b>B · Shadow comparison</b><br>Recommendation versus expert action; disagreement and explanation.<br><br><hr/><br><hr/> | <b>C · Controlled test</b><br>Safety, limits, rollback, observation plan.<br><br><hr/><br><hr/> |
| <b>D · Post-action proof</b><br>Metrology, repeatability, recurrence, and secondary effects.<br><br><div><hr/><hr/><hr/><hr/><hr/><hr/><hr/><hr/></div> |                                                                                                                          |                                                                                                 |

## 7 · QUALIFICATION GATE

| Gate                         | Required evidence                                                   | Status      |
|------------------------------|---------------------------------------------------------------------|-------------|
| Intent is explicit           | Operation, geometry, tolerance, context, and named owner.           | Pass / Fail |
| Physical state is sufficient | Frames, calibration, tool, fixture, material, sensors, environment. | Pass / Fail |
| Cause is bounded             | Hypothesis, alternatives, confidence, and disconfirming tests.      | Pass / Fail |
| Action is contained          | Limit, consequence, fallback, and authority.                        | Pass / Fail |
| Outcome is proven            | Post-action measurement and repeatability.                          | Pass / Fail |
| Reuse boundary is defined    | Applicability, provenance, version, and expiry.                     | Pass / Fail |

|                                                                                    |                                                                                                                 |                                                                        |
|------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| <b>Release decision</b><br>Observe · Shadow · Bounded · Hold<br><br><hr/><br><hr/> | <b>Learning decision</b><br>Local fix · Conditional reuse · Correction primitive · Reject<br><br><hr/><br><hr/> | <b>Approver / date / review trigger</b><br><br><hr/><br><hr/><br><hr/> |
