

Russell Dudek - Cover Letter

Russell Dudek | VP of AI candidate vision for 4MP | Page 1 of 1

Vice President of Artificial Intelligence - 4MP

4MP is tackling a problem that becomes more demanding as the product becomes more valuable: digital manufacturing intent may be exact, but the physical machine, tool, fixture, environment, and material state are not. The role must create the decision architecture that explains residuals, bounds intervention, proves results, and determines what learning may responsibly generalize.

At Vape-Jet, I connect factory, field, customer, quality, support, engineering, ERP, telemetry, and approximately 1,000 fielded robots into earlier risk detection, prioritized work, standard work, and accountability. Through DudeWorth, I design agentic workflows that combine structured context, retrieval, human judgment, escalation, evaluation, and decision records. At Compunetics, I led engineering, manufacturing, quality, customer delivery, root cause, and process controls in high-reliability environments.

My experience is adjacent to the deepest current CNC-controls and production-ML specialization. The value I bring is complementary systems authority: connecting machine evidence, technical teams, operating reality, quality discipline, human decision rights, and adoption into one repeatable mechanism.

The candidate vision at <https://russelldudek.github.io/Xora/> presents the Precision Workpiece, Autonomous Correction Kernel, 120-day plan, and Correction Qualification Record.

Carpe diem, Russell Dudek
