Executive thesis

Build the intelligence and operating architecture that converts manufacturing intent, physical machine state, geometry, metrology evidence, physics constraints, and production feedback into safe corrective action - and build the seed-stage AI organization capable of making that system compound.

Candidate thesis

Make every correction explainable, bounded, validated, and reusable.

4MP Interview Thesis Brief

Precision Workpiece

Parse intent, reconstruct state, explain residual, bound action, prove result, and admit learning to memory only when scope, evidence, authority, and version are explicit.

Candidate thesis

Make every correction explainable, bounded, validated, and reusable.

Evidence and contribution

Vape-Jet proves machine and fleet feedback integration. DudeWorth proves agentic workflow and authority design. Compunetics proves high-reliability manufacturing and root cause. ZeusVu and Amazon prove autonomy, safety boundaries, launch, and mechanisms at scale.

Candidate thesis

Make every correction explainable, bounded, validated, and reusable.

Entry and executive discussion

Instrument one correction class, close a narrow loop, stress the boundary, and install the compounding system. Ask which correction class has the clearest economic value and cleanest measurement loop, where authority should live, and what evidence permits broader reuse.

Candidate thesis

Make every correction explainable, bounded, validated, and reusable.
